FAAST
FIRE ALARM ASPIRATION SENSING TECHNOLOGY®

Multi-stage filtering and intelligence separates and distinguishes nuisance particulate from smoke.

Field-Replaceable Filter

- 30 micron
- Only 1 filter to easily change
- An initial warning is given to change the filter and a Minor fault is generated
- If the filter is not changed within 72 hours, an Urgent fault is generated

FAAST

FAAST Operation

FAAST
FIRE ALARM ASPIRATION SENSING TECHNOLOGY®

- Air from the sampling tube is filtered, large nuisance particulates (dust, dirt, etc...) are discarded
- Blue LED identifies fire particulates
- Infrared Laser identifies non-fire particulates
- Advanced Algorithms discriminate between nuisance particulates and smoke

FAAST Connectivity Options

- **SLC Addressable models communicate directly over the existing fire alarm signaling network**
- **Integral Ethernet capabilities enable remote configuring options using PipelQ**
- **Internal Web Server allows remote monitoring from anywhere in the world via web browser**
- **Modbus communications over TCP/IP or Serial modbus**

FAAST

FAAST 9400X

FAAST
FIRE ALARM ASPIRATION SENSING TECHNOLOGY®

4 Ports – 28,800 Sq. Ft. Coverage

- Ultrasonic airflow sensing per inlet and through sensing chamber for the most accurate system health monitoring
- 3 Fan Speeds for optimal operation (465 mA-high, 340 mA-med, 220 mA-low)
- USB for easy commissioning – no external power needed
- Serial and TCP Modbus
- Three stage filtration technology:
 - Patented Particle Separator
 - Replaceable Filter
 - Dual Vision Sensing Technology

FAAST 9400X

FAAST
FIRE ALARM ASPIRATION SENSING TECHNOLOGY®

4 Ports – 28,800 Sq. Ft. Coverage

- 4 numbered ports with top or bottom access
- Maximum single pipe length – 400'
- Maximum aggregate pipe length – 1050'
- Operating temperature – 32°F to 100°F
- Sampled air temperature - -4°F to 120°F
- Current listings: UL, ULC, and FM

Intuitive User Interface

FAAST
FIRE ALARM ASPIRATION SENSING TECHNOLOGY®

4 Ports – 28,800 Sq. Ft. Coverage

- FAAST family look
- 4 general fault conditions
- New LCD interface for at a glance status update
 - Detailed fault information
 - Detailed flow information
 - Test/Isolate/Disable/Reset Baseline
 - Event history
 - View configuration
 - Set time
- Easy Access Replaceable Filter

PipelQ 2.0 – Overview

- Pipe design, system configuration and device monitoring software
- FAAST does not need to be connected for pipe design and system settings
- Once programmed, settings are downloaded using FAAST's Ethernet connection
- PipelQ is also available for use while connected to the Internet
- Download at systemsensor.com/FAAST

FAAST

FAAST Summary – Simplicity + Integration

Early Warning Aspiration Detection

- Advanced nuisance alarm rejection

Extensive integration options:

- Direct SLC connectivity, ModBus on board, Ethernet via web browser and email server

FAAST XT covers up to 28800 sq. ft. in a single device

- Ultrasonic airflow sensing per inlet and through chamber for the most accurate monitoring

Patented 3 stage filtration allows use in the harshest environments

- Suited for a wide variety of applications, not **just** mission critical

PipeIQ 2.0

- Pipe design, system configuration and device monitoring software
